Change Log

Date	Changes
July 8, 2021	Initial version

1 Introduction

Progress resells third-party products complementary to OpenEdge. This document describes the life cycle of the third-party products, their compatibility with OpenEdge releases, and the technical support provided by Progress. This document is an addendum to the [Progress OpenEdge Life Cycle Policy Guide](#).

Note:

- i. This document includes links to web resources hosted by third-party vendors. These links may change or become invalid without notification.
- ii. Progress makes no commitment about the life cycle of any third-party product, or the frequency of any third-party product release. Any information Progress shares regarding a third-party product's life cycle or the frequency of any third-party product release is determined solely by such third-party and subject to change.

2 Roundtable® TSMS

Roundtable TSMS publishes one or more releases that correspond to one or more OpenEdge releases. Similar to OpenEdge, Roundtable Software identifies its products in three life cycle phases: **Active**, **Mature**, and **Retired**. The [Roundtable Product Life Cycle Guide](#) defines each phase and release status.

2.1 Compatibility

The [Roundtable TSMS OpenEdge Compatibility Matrix](#) describes the compatibility between Roundtable TSMS and Progress OpenEdge.

2.2 Support

Progress provides technical support for Roundtable TSMS, as per [Roundtable Product Life Cycle Guide](#).

3 Aurea Messenger

Aurea Messenger, previously Aurea Sonic, has one or more releases per year. The [Aurea Product Support End of Life \(EOL\) Dates and Policy](#) lists the supported releases and their maintenance end dates.

3.1 Compatibility

The [OpenEdge 12 Platform and Product Availability Guide](#) lists the Aurea Messenger releases supported by OpenEdge 12.x. Progress supports any version above the minimum supported Aurea Messenger version documented in the guide.

3.2 Support

Progress passes on the extended support for Aurea Messenger as listed on the [Aurea Product Support End of Life \(EOL\) Dates and Policy](#) page.

4 Infragistics

The Progress OpenEdge Ultra Controls.NET product is based on an offering from Infragistics. The version of the underlying Infragistics product shipped by Progress may be updated during the first year. The

updates can include both bug fixes and enhancements. After the first year, any further bug fixes or enhancements are included in the latest Infragistics product release.

4.1 Compatibility

The Infragistics product version shipped with a specific OpenEdge release is only compatible with that release.

4.2 Support

The [Progress OpenEdge Life Cycle Policy Guide](#) describes the technical support Progress provides for Infragistics products. This may include Progress providing an upgrade or a newer version of the Infragistics product, solely at Progress' discretion.

5 Code Analyzer for ABL

Riverside Software develops and maintains the Code Analyzer for ABL (CABL), a static code analysis plugin that is installed over Progress Developer Studio for OpenEdge (PDSOE). Riverside Software releases new plugins on an ad-hoc basis. Progress ships an evaluation version of CABL, with a limited set of rules, as a separate installer with Progress Developer Studio for OpenEdge.

5.1 Compatibility

The version of CABL shipped with Progress Developer Studio for OpenEdge is only certified to work with that release.

5.2 Support

The evaluation version of CABL provided with Progress Developer Studio for OpenEdge is offered on an 'as-is' basis. To access a paid version of CABL, which includes technical support, visit [Riverside Software](#).
